INTRODUCTION

This volume contains maps showing 1962 land use, surface water diversion systems, and classification of lands. These maps supplement the statistical data included in Volume I and are copies of published topographic maps on which the original field notations have been superimposed. Legends explaining the notations precede the maps.

Two sets of figures covering the unit are included, one showing the land use and the diversion systems and the other showing the land classification. The two maps of each area are presented on facing pages. Each of these figures covers an area 7-1/2 minutes in longitude by 7-1/2 minutes in latitude. They are quarters of the "15-minute" quadrangles published by the U. S. Geological Survey. The scale of the figures is approximately the same as that of the original "15-minute" quadrangles.

The figures are numbered in a grid-type system beginning at the northern and western extremes of the State. Each figure is designated by two numbers indicating the tier and column in which it is located. For example, Figure "10-20" at the north end of the hydrographic unit is in the tenth tier from the north and the twentieth column from the west within this statewide numbering system. The "Index to Figures and Subunits" on page 6 shows the area covered by each figure, the names of the corresponding quadrangle maps, and the subunits into which the hydrographic unit has been divided.

LAND USE LEGEND

The symbols and combinations of symbols which indicate various land uses on the figures are explained in the following sections. Sections I, II, III, and IV describe the symbols relating to the particular major use categories. Section V describes miscellaneous symbols which may relate to any use category.

The first letter of the notation on each land parcel indicates the section in which the description may be found.

<u>First Letter</u>	<u>Section of Legend</u>
"i" or "n"	I Agriculture
"U"	II Urban
"R"	III Recreation
"N"	IV Native

PART B		
	<u>Symbols and Explanations</u>	<u>Examples</u>
1	<u>SOIL TYPE</u> Crops grown specifically for seed.	1F1-S Irrigated alfalfa seed crop
2	<u>YOUNG ORCHARDS AND VINEYARDS</u> Production commercially insignificant due to immaturity.	1F3-Y Young peach-orchard irrigated oranges
3	<u>DEGRADED ORCHARDS AND VINEYARDS</u> Condition such that renewal of cultural practices would restore economic production.	1F4-A Apple orchard previously irrigated but now abandoned
	Fraction, <u>INTERCROPPING</u> Two symbols written as a fraction.	$\frac{1F5}{G1}$ Peaches 1st cropped with barley
4	<u>RECLAMATION</u> Lands being leached of harmful salts.	1F6-C 11-L
	<u>FALLOW LAND</u> "F" followed by crop group most common in the area or that of last season's crop, if known.	1F7 11-L Fallow land with irrigation facilities in a truck crop area

SECTION II. URBAN

U URBAN (General)

Residential, commercial, and industrial (will be used alone when further breakdown is not required)

UR RESIDENTIAL

One- and two-family units, including trailer courts

May be followed by Development Factor or Water Use Factor, below:

Development Factor

Type of development (houses per acre)	Percent developed
0 0.5 to 3	0 - 10
1 3 to 4	10 - 25
2 4 to 6	25 - 50
3 6 to 8	50 - 75
4 8 to 10	75 - 90
5 10 to 12	90 - 100
6 12 or more	100
7 7 or more	75 - 90
8 8 or more	25 - 50
9 9 or more	0 - 25

Water Use Factor

(Percent of the total area that is irrigated)

0 0 - 10	6 50 - 60
1 10 - 20	7 60 - 70
2 20 - 30	8 70 - 80
3 30 - 40	9 80 - 90
4 40 - 50	10 90 - 100

Example: UR 41

Development Factor Water Use Factor

UI INDUSTRIAL

- 1 Manufacturing, assembling, and general processing
- 2 Extractive industries (oil fields, rock quarries, gravel pits, public dumps, rock and gravel processing plants, etc.)
- 3 Storage and distribution (warehouses, substations, railroad marshalling yards, tank farms, etc.)
- 4 Saw mills
- 5 Oil refineries
- 6 Paper mills
- 7 Meat packing plants
- 8 Steel and aluminum mills
- 9 Fruit and vegetable canneries and general food processing
- 10 Miscellaneous high water use (indicates a high water use not covered above)

UC COMMERCIAL

- 1 Miscellaneous establishments (offices and retailers)
- 2 Hotels
- 3 Motels
- 4 Apartments, barracks (three-family units and larger)
- 5 Institutions (hospitals, prisons, reformatories, asylums, etc., having a permanently stable 24-hour resident population)
- 6 Schools (yards mapped separately if large enough)
- 7 Municipal auditoriums, theaters, churches, buildings, and stands associated with race tracks, football stadiums, baseball parks, rodeo arenas, etc.
- 8 Miscellaneous high water use (indicates a high water use not covered above)

UV VACANT

- 1 Miscellaneous unpaved areas (vacant lots, graveled surfaces, playing fields, nonirrigated freeway strips, raw lands within metropolitan areas, etc.)
- 2 Miscellaneous paved areas (parking lots, runways, freeways, filled surfaces, flood control channels, tennis court areas, auto sales lots, etc.)

SECTION III. RECREATION

RR RESIDENTIAL

Permanent and summer home tracts within a primarily recreational area. The estimated number of houses per acre is indicated by a number in the symbol.

RC COMMERCIAL

Commercial areas within a primarily recreational area (includes motels, resorts, hotels, stores, etc.)

RT CAMP AND TRAILER SITES

Camp and trailer sites in a primarily recreational area

SECTION V. MISCELLANEOUS

E ENTRY DENIED

Permission to enter not obtainable

M MILITARY AREAS

Indicates lands owned or controlled by the military and is used following the land use symbol.

Example: iPl-M Irrigated cotton in a military area.

P PARKS

Indicates all types of parks, both public and private, and is used following the land use symbol.

Example: i34-P Irrigated lawn area within a park.

Percentages MIXED LAND USE

Indicated by percentages following land use symbols.

Examples: iDf 40
iV 20
UC 2 40

SECTION IV. NATIVE

NW NATIVE VEGETATION

NR RIPARIAN VEGETATION

1. Swamps and marshes
2. Meadowland

NW WATER SURFACE

NC NATIVE CLASSES UNSEGREGATED

WATER USE LEGEND

GRAVITY DIVERSION

PUMP DIVERSION

DIVERSION CANAL OR DITCH

DIVERSION PIPELINE

NATURAL CHANNEL
USED AS CONDUIT

DIVERSION NUMBERING SYSTEM

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Diversions are numbered by township, range, section, and sixteenth-section as D-32N/7W-6D1

LAND CLASSIFICATION LEGEND

Each land parcel delineated on the "Classification of Lands" figures is classified in one of four general categories--urban, recreational, irrigable, or miscellaneous--and is labeled accordingly. These categories and the related symbols are explained in the following sections.

SECTION I. URBAN AND RECREATIONAL LANDS

This section defines the urban and recreational classes as indicated by symbols on the figures. Some of these lands, though well suited or presently used for recreational purposes, are also mapped as to irrigability. On these lands the irrigable class symbol from Section II appears under the recreational class as a fraction.

- | | |
|--|---|
| UD The total area of cities, towns, and small communities presently used for residential commercial, recreational, and industrial purposes. | RC Existing and potential commercial areas which occur within a primarily recreational area and which include motels, resorts, hotels, stores, etc. |
| RR Existing and potential permanent and summer home tracts within a primarily recreational area. The estimated number of houses, under conditions of full development, is indicated by a number in the symbol, i.e., RR-3 is suitable for three houses per acre. | RT Existing and potential camp and trailer sites within a primarily recreational area. |
| | PP Existing racetracks, fairgrounds, and private, city, county, state, and federal parks. |

SECTION II. IRRIGABLE LANDS

Irrigable lands are identified by notations which begin with a letter "V", "H", or "M". These symbols indicate the general slope conditions, and may appear alone or followed by other symbols. The slope conditions indicated by these letters are:

- | | | |
|---|--|---|
| V These lands are level or slightly sloping and vary from smooth to hummocky or gently undulating relief. The maximum allowable slope is 6 percent for smooth, reasonable large bodies lying in the same plane. | H These are lands with greater slope and/or relief than those of the "V" class. They vary from smooth to moderately rolling or undulating relief. The maximum allowable slope is 20 percent for smooth, reasonable large bodies lying in the same plane. | M These are lands with greater slope and/or relief than those of the "H" class. They vary from smooth to steeply rolling or undulating relief. The maximum allowable slope is 30 percent for smooth, reasonable large bodies lying in the same plane. |
|---|--|---|

The description below applies to all "V", "H", and "M" lands on which this slope symbol appears by itself:

Have soils of medium or deep effective root zones; are permeable throughout; are free of salinity, alkalinity, rock, or other conditions which would limit crop adaptability; and are suitable for all climatically adapted crops, being limited only by topographic conditions.

Where exceptions to the above, or other special conditions exist, the additional symbols in Section II, Irrigable Lands on page 5, are appended to the "V", "H" or "M".

(Continued)

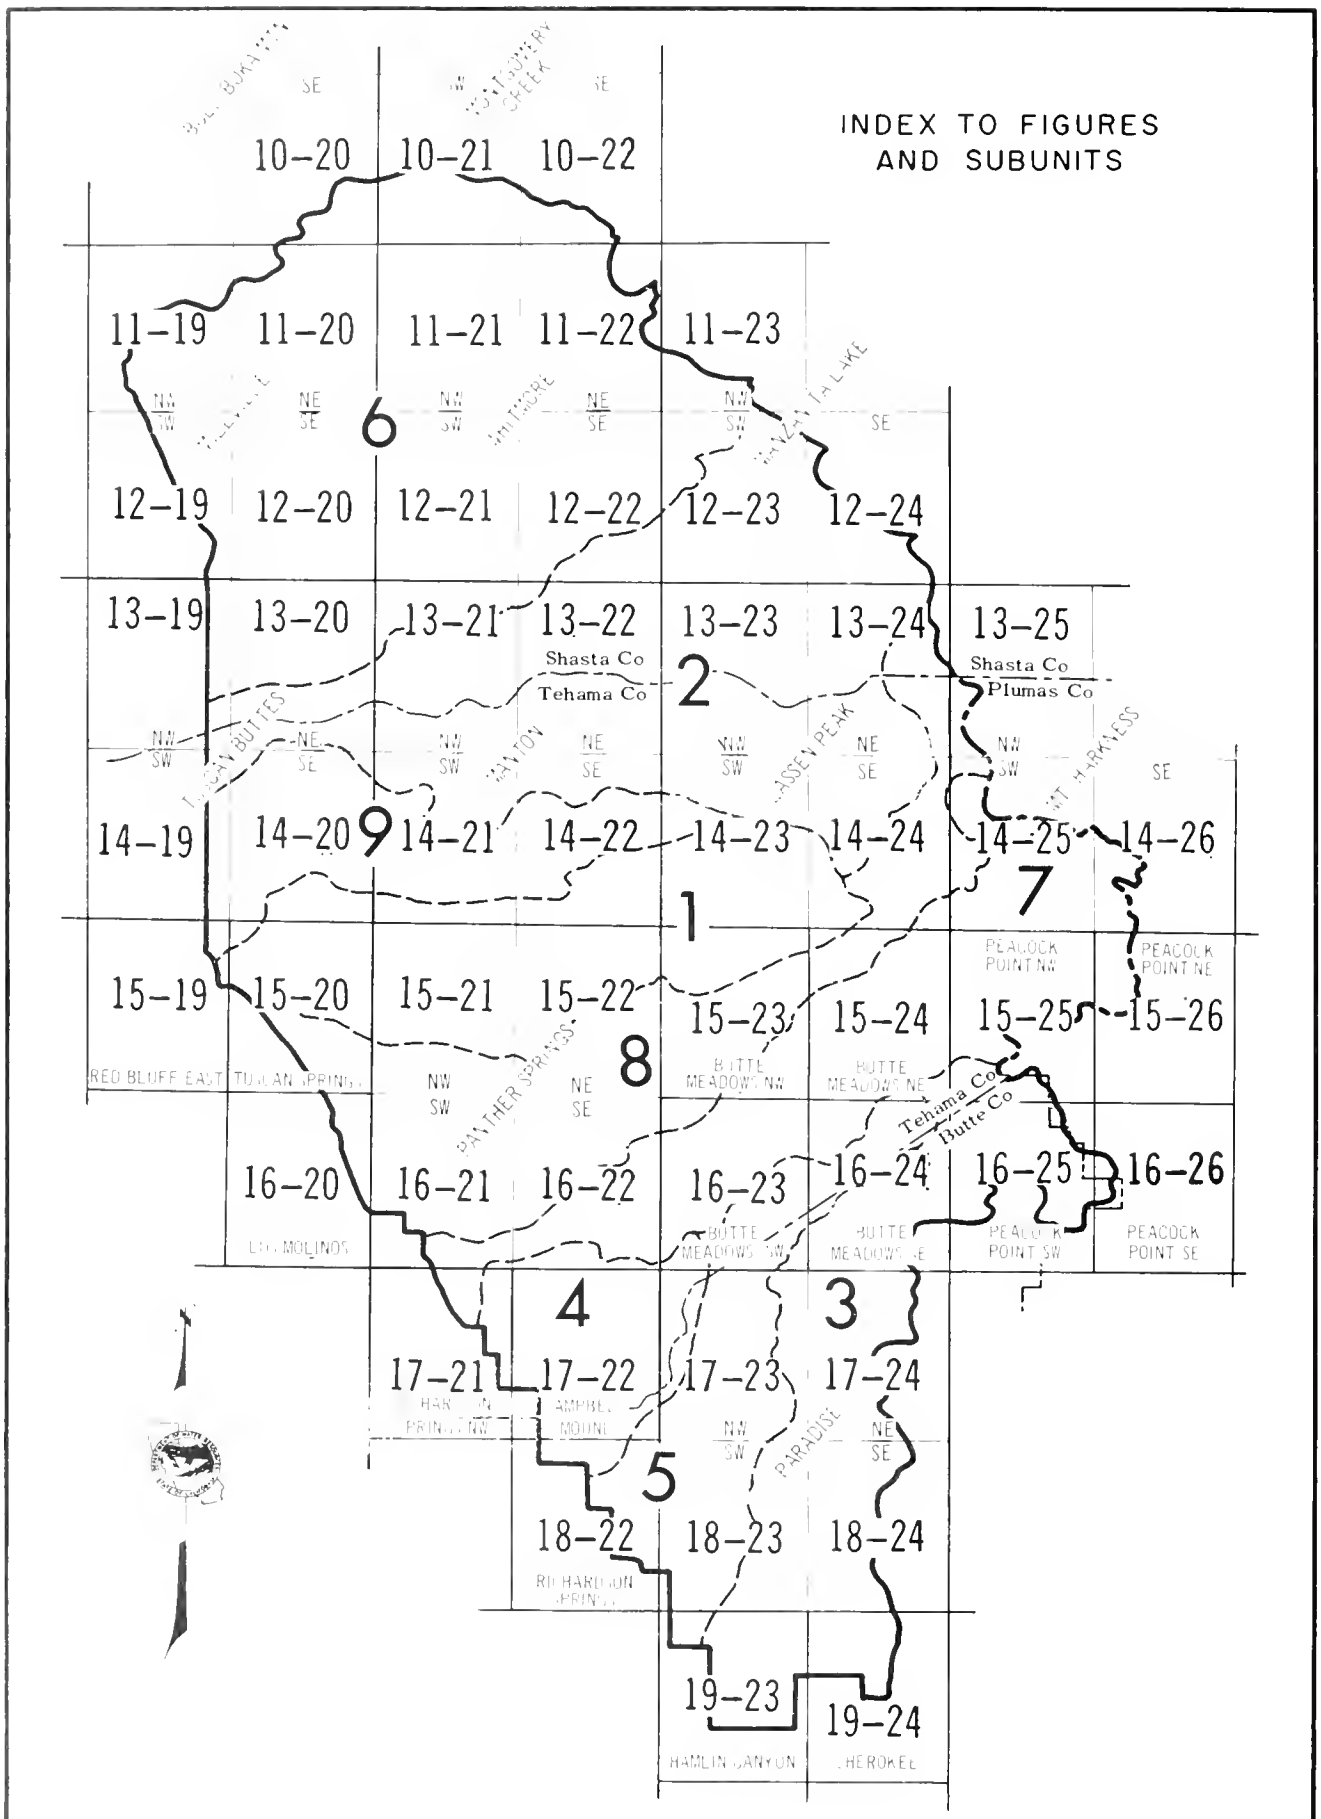

SECTION II. IRRIGABLE LANDS (Continued)

The symbols below, appended to "V", "H" or "M", indicate the described conditions.

- W Indicates the presence of a high water table, which in effect limits the present crop adaptability of these lands to pasture crops. Drainage and a change in irrigation practice would be required to affect the crop adaptability.
- S Indicates the presence of an excess of soluble salts or exchangeable sodium in slight amounts, which limits the present adaptability of these lands to crops tolerant to such conditions. The presence of salts within the soil generally indicates poor drainage and a medium to high water table. Reclamation of these lands will involve drainage and the application of small amounts of amendments and some additional water over and above crop requirements to leach out the harmful salts.
- SS Indicates the presence of an excess of soluble salts or exchangeable sodium in sufficient quantity to require the application of moderate amounts of amendments and some additional water over and above crop requirements to effect reclamation.
- SA Indicates the presence of an excess of soluble salts or exchangeable sodium in sufficient quantity to require the application of large amounts of amendments and some additional water over and above crop requirements to effect reclamation.
- H Indicates very fine textures, which in general make these lands best suited for production of shallow-rooted crops.
- L Indicates fairly coarse textures and low moisture-holding capacities, which in general make these lands unsuited for production of shallow-rooted crops.
- P Indicates shallow depth of the effective root zone, which in general limits use of these lands to shallow-rooted crops.
- R Indicates enough rock on the surface or within the plow zone to limit use of the land for cultivated crops.
- B Indicates low-lying basin and seep areas.
- (L) Indicates ground cover varying from a light to moderately dense growth of low brush through a low-density growth of medium-height trees.
- (M) Indicates ground cover varying from a high-density growth of low brush through a moderately dense growth of medium-height to tall trees.
- (H) Indicates ground cover varying from a high-density growth of medium-height trees through a very dense growth of large trees.
- 2, -4, -6, or -8 Number indicates, in feet, the average difference between highs and lows due to microrelief.

SECTION III. MISCELLANEOUS LANDS

- F Presently forested lands, or lands subject to forest management, which meet the requirements for irrigable land but which, because of climatic conditions and physiographic position, are better suited for timber production or some type of forest management program rather than for irrigated agriculture.
- VA Smooth lying valley lands which are affected by such heavy concentrations of salts that further detailed studies would be required to determine the feasibility of reclaiming these lands for irrigated agriculture.
- VM Swamp and marsh lands which usually support a heavy growth of phreatophytes and are covered by water most of the time.
- N Includes all lands which fail to meet the requirements of any of the foregoing classes.
